

# PESTICIDES

**By: Mario Bravo**

# Evolution

- There a lot of sources about this topic to support my point of view.
- What keeps me motivated is fighting for the rights of the farmworkers.

What are the *pros* and *cons* of pesticide use?

## Pros-

1. kills insects
2. kills weeds
3. kills other pests that destroy crops

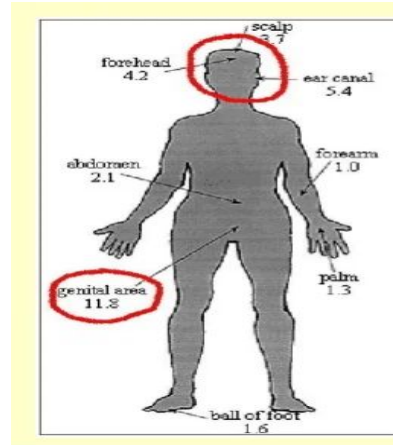

## Cons-

1. Threaten human health
2. Pollute ecosystems
3. Promote the evolution of pest resistance

# effects in the human health

My argument is to fight for the farmworkers rights and safety.

- Parts of the body absorb pesticides at different rates.
- The head is 4 times more absorbent than the hand
- and the genital area is 11 times more absorbent.

# PROCESS

**GREENBERG** VCReporter 2010 [steve@greenberg-art.com](mailto:steve@greenberg-art.com)

# TYPES OF PESTICIDES

- Malathion 50%
- Boric acid
- Bacillus thuringiensis in liquid form
- Permethrin
